Professional Summary

Software Engineer with around 4 years of experience working on application development, data processing systems, and machine learning projects. I am skilled in Java, Python, and SQL with experience developing REST APIs, building web interfaces, and working with cloud tools such as AWS and Docker. Comfortable working in team environments using Agile practices and version control systems. I am interested in building reliable and efficient software solutions that solve real-world problems.

Technical Skills

- **Programming Languages:** Java, Python, SQL, PL/SQL, Shell Scripting
- **Backend Development:** Spring Boot, Hibernate, Django, Flask, FastAPI, REST APIs, GraphQL
- **Data Engineering & Streaming:** Apache Kafka, Kafka Streams, Airflow, PySpark, ETL Pipelines
- **Machine Learning & MLOps:** Scikit-learn, TensorFlow, PyTorch, Pandas, NumPy, MLflow, Model Monitoring, AWS SageMaker
- **Cloud Platforms:** AWS (S3, EC2, EKS, Lambda, RDS, Glue), Azure (Data Factory, Databricks)
- **Databases:** PostgreSQL, Oracle 19c, MySQL, MongoDB, DynamoDB, Redis
- **DevOps & CI/CD:** Docker, Kubernetes, Jenkins, Git, Bitbucket, Maven, Prometheus, Grafana
- **Security & Compliance:** OAuth2, JWT, Spring Security, PCI DSS, GDPR, AML/KYC
- **Tools & APIs:** Bloomberg API, Reuters API, JIRA, Power BI, Splunk

Professional Experience

Software Engineer — **May 2025 –Present**
Citi Bank — **Houston, TX**

- Developed scalable machine learning microservices using Python (Fast API) and Spring Boot to support fraud detection and anti-money laundering (AML) monitoring for high-volume financial transactions.
- Built real-time data streaming pipelines using Apache Kafka to process large volumes of transaction data used for risk analysis and fraud detection systems.
- Designed centralized feature storage using PostgreSQL and DynamoDB to standardize feature engineering across multiple machine learning models.
- Implemented automated MLOps pipelines using Jenkins and AWS services to train, validate, and deploy models on Kubernetes (EKS), improving deployment efficiency.
- Developed large-scale data processing pipelines using PySpark and Airflow to analyze millions of financial transactions and detect anomalies.
- Integrated external financial data sources such as Bloomberg and Reuters APIs to support market analytics and regulatory reporting.
- Monitored production systems using Prometheus and Grafana to track model performance, application latency, and data quality in production environments.

Associate Software Engineer **May 2022-Dec 2023**
JPMorgan Chase **Hyderabad, India**

- Developed backend microservices using Java, Spring Boot, and REST APIs to support financial transaction processing and internal banking systems.
- Built real-time event streaming applications using Apache Kafka and Kafka Streams to process financial data and detect suspicious transaction patterns.
- Designed ETL pipelines to ingest and transform data from Oracle and PostgreSQL into centralized analytics platforms.
- Implemented machine learning models using Python and Scikit-learn to identify fraudulent transactions and unusual financial activity.
- Deployed applications on AWS infrastructure including S3, EC2, and SageMaker for scalable data processing and model hosting.
- Secured APIs using Spring Security, OAuth2, and JWT authentication to ensure secure communication between internal banking systems.
- Developed web dashboards using ReactJS and AngularJS to visualize transaction analytics and system performance metrics.

Software Engineer **Jun 2020-May 2022**
Mitaja Corporation **Hyderabad, India**

- Developed backend services using Java, Spring Boot, and Hibernate to support financial data processing applications.
- Designed and implemented data ingestion pipelines using Apache Kafka and Python to process real-time market data feeds.
- Built REST APIs using Django and Flask to integrate analytics platforms with trading and portfolio systems.
- Optimized SQL queries and database structures in Oracle to improve performance for data-intensive applications.
- Migrated legacy systems to microservices architecture, improving scalability and system reliability.
- Deployed applications on AWS using EC2, Lambda, and containerized environments with Docker and Kubernetes.

Education

Master of Science in Computer Science Jan 2024 – Dec 2025
Lamar University, Beaumont, TX
GPA: 4.0
